

OM-510 Massage Chair

by Omega Massage Chair, Inc

Quality

When it comes to quality, The Omega Line is the gold standard. We use genuine Japanese components for the roller units, motors, and PCU board. No other chair uses the technology and assembly of our massage chairs with cost effective measure, while utilizing high quality Japanese components on the important aspects of a massage chair. Most massage chairs are made with Chinese or Taiwanese components. The ratio of breakdown using cheaper components is the primary reason that massage chairs need constant repair work or maintenance.

Upholstery: Partial genuine leather with nano high-tech, anti-bacterial, and pollution-free leather-like vinyl making up the remaining areas of the upholstery.

Features:

Remote Control: LCD display with cool-blue backlight.

Massage Function:

- Kneading, Tapping, Rolling, and Combination.
- Spiral vibration.
- 3 levels of massage intensities – low, medium, high
- 3 massage-roller width selections that can be adjusted manually or automatically – narrow, regular and wide.

Chair-back

Contoured and shaped to support the back, the OM-510 automatically searches and memorizes one's body physique, and weight, then massages accordingly. Choose from several massage options: automatic, overall, shoulder, back, and lower back programs or manually choose a fixed point, or a general area, and enjoy a wonderful pressure point massage.

Seat Cushion and Footrest 3D Air Pressure Massage System

Take pleasure in having the buttock, thighs, calves, and feet massaged by the built-in 3D air pressure system, which the footrest also extends and stretches the knee and ankle joints, making for a complete lower body experience. Fifteen (15) tactically placed air bags along with special design foot massage knobs massage from the *governor vessel* to the *bladder meridian* to effectively achieve the 3D air pressure massage system.

Foot Reflexology links directly to and stimulates the internal part of the body, and is very important to maintaining a healthy lifestyle.

All the features can help to reduce body fatigue, increase blood circulation, and warm up the body for a more productive day. Whether one chooses automatic or manual programs, a professional massage, comparable to one given by a masseuse, ensues.

Comprehensive vs. Limited Massage Chairs:

Comprehensive Massage Chair

Simultaneously massage both the upper- and lower-body, including the buttock, thighs, calves, and feet. Lower-body massage is enhanced by our special L-shaped footrest.

Limited Massage Chairs

Neglect or fail to comprehensively and thoroughly massage the lower-body while the upper-body massage is mediocre.

Specifications:

Operating Voltage	110~120V / 50~60Hz
